JAVA DEVELOPER

Java developer with eight years development experience supporting military, governmental and commercial programs including the design, development and integration of computer software programs.

SKILLS

Programming Languages: Java, JavaScript, Kotlin, PHP, Swift, C++, HTML, SQL, XML

Integrated Development Environments: Eclipse, NetBeans, Android Studio, Xcode

Frameworks: JQuery, JavaScript Object Notation (JSON), Hibernate, Java Server Pages Standard Tag Libraries (JSTL), Spring MVC

Databases: Oracle, MySQL, MongoDB, SQLite

Version Control: GitHub, Subversion, Atlassian, CVS

Certifications: Oracle Certified Associate Java SE 7 Programmer and Certified SAFe 4 Practitioner

ACTIVE SECRET CLEARANCE

EDUCATION

Android Developer Nanodegree

Udacity 2018

Master's of Science in Computer Science

Norfolk State University 2010

Bachelor's of Science in Computer Science

East Tennessee State University 2000

WORK EXPERIENCE

Java Developer

San Antonio, TX
Principle InfoTech November 2018 to Present
Frankie Friend and Associates October 2017 to October 2018

- Develop modules for an application used by the US Air Force to help over 38,000 civilian and military police officers perform their duties.
- Transforming the application to use the Spring MVC framework and support the latest version of Java.
- Creating front-end validation methods using Javascript in an effort to transmit information to Spring MVC controller to facilitate storage in the database.
- Skills/Technologies Used: Java, Java Server Pages, Eclipse, Apache Tomcat, JavaScript, JSON, JSTL, AJAX, HTML, CSS, SQL, Oracle Weblogic, Spring MVC*

Software Systems Engineer

Chesapeake, VA
Xcelerate Solutions April 2016 – May 2017

- Developed modules for management information system application used in development, execution and management of purchasing of supplies for the Department of Defense.
- Resolved over 1900 issues in source code resulting from initial code review.
- Responded to trouble calls regarding site connectivity.
- Skills/Technologies Used: Java, Eclipse, Apache Tomcat*

Software Engineer

Norfolk, VA
Dominion Enterprises October 2014 – November 2015

- Collaborated with the engineering team to develop the infrastructure that supports exciting new products across multiple platforms and devices.
- Contributed to the continued development and maintenance of multiple high-traffic, high availability web sites, mobile sites, and mobile applications.
- Contributed to systems and applications which process, transform and generate data from and for many partners on a daily basis.
- Mentored a team of college students that developed a mobile app during a company-sponsored hackathon, resulting in the team winning the Most Innovative App award.
- Skills/Technologies Used: PHP, SQL, JavaScript, JQuery, JSON, Linux, Apache Tomcat, MySQL, GitHub, Zend, MongoDB, Lucene Solr, Oracle, NetBeans, Eclipse*

Programmer

Portsmouth, VA
CDI Marine Company March 2014 – October 2014

- Developed modules for management information system application used in development, execution and management of purchasing of supplies within the department.
- Implemented and modified designs of interfaces based on requirements provided using Microsoft Visual Basic for Applications as the development layer and Microsoft Access database to store the data provided by the users that involved the design or redesign of tables and SQL queries.
- Provided technical support to end users regarding system issues resulting in reduced downtime
- Skills/Technologies Used: Microsoft Access, Visual Basic for Applications, SQL*

Software Engineer

Suffolk, VA
SAIC July 2012 – August 2013

- Developed modules for financial and management information system application used in the development, execution and management of a \$140M+ joint training budget for the Department of Defense
- Utilized Excel templates to generate reports using Windward Reports as part of migration to a web application
- Implemented designs of interfaces based on requirements provided using Java for the web presentation layer, Hibernate for the mapping files and Oracle database to store the data provided by the users that involved design of tables and SQL queries constructed from desktop application
- Provided technical support to end users regarding system issues resulting in reduced downtime
- Skills/Technologies Used: Java, Java Server Pages, SQL, Oracle, Hibernate, J2EE, Apache Tomcat, Eclipse, Windward Reports, Javascript*
